

Tom van der Peet

software developer / backend-focused generalist

PROFILE

Backend-focused software developer with a strong PHP/Symfony focus and nearly six years of professional development experience. Broad experience across frontend development, infrastructure and operations, with responsibilities ranging from application development to deployment and ongoing system management. Since then, I have continued building and operating my own products and client systems, with a preference for practical work where I can take ownership beyond a narrowly defined implementation role.

EXPERIENCE

4BIS Innovations

Apr 2019 – Feb 2025

Software developer

Developed and maintained web applications across a broad range of projects, primarily with PHP/Symfony and React. Responsibilities also extended into production infrastructure and operations, and later included mentoring and training interns and junior developers.

Technology PHP, Symfony, React, JavaScript, Linux, infrastructure
